

DISTEL

c

DOSING SYSTEM

ELIMINATE SINGLE-USE PLASTIC WIPES

The DISTEL DOSING SYSTEM is intended for the cleaning and disinfection of surfaces of non-invasive medical devices and equipment, and of hard non-porous environmental surfaces.

A 500ml bottle of DISTEL DOSING SYSTEM concentrate generates measured doses of surface disinfectant solution for application via a Doser or Sprayer.

The DISTEL DOSING SYSTEM working solution is effective against coronaviruses in 2 minutes. Efficacy is also proven against bacteria, yeasts, enveloped viruses and nucleic acids (DNA/RNA)*

*Please see the microbiological efficacy summary for specific contact times.

Designed to be repurposed and reused, the DISTEL DOSING SYSTEM keeps the environment in mind.

A 500ml bottle of DISTEL DOSING SYSTEM concentrate delivers 10 x 500ml bottles of working solution.

The DISTEL DOSING SYSTEM can be used with any spreader to create freshly made surface disinfectant wipes on the go. Choose a sustainably sourced spreader to reduce single-use plastic waste.
